

Maretron Adds Indoor Relative Humidity and Temperature Sensor to Its Networked Vessel Monitoring and Control Product Line

PHOENIX, February 12th, 2016 - Today Maretron announces the release of an indoor relative humidity and temperature sensor (part number IRHT-01). The IRHT-01 is used in conjunction with Maretron's Current Loop Monitor (CLM100), which allows indoor humidity and temperature to be broadcast over an NMEA 2000® network where it can be monitored from any compatible NMEA 2000® display. When used together with a Maretron displays, alerts can be set so the user can be informed of abnormal or detrimental conditions. And when not on-board the vessel, users can be notified through emails or text messages. Additionally, the relative humidity and temperature can be stored using Maretron's data recorder (VDR100) for later analysis.

Kip Wasilewski, Maretron's Director of Sales, said, "Maretron continues to expand its product line to provide the most comprehensive vessel monitoring and control system available". Kip went on to say, "Like all Maretron products the IRHT-01 integrates seamlessly into Maretron's product line from the network design tool (N2KBuilder®) to the configuration tool (N2KAnalyzer®) and of course the display products with comprehensive alarms and warnings capable of notifying the user either on-board or off." To learn more about Maretron's indoor relative humidity and temperature transmitter (IRHT-01), please visit the following web page.
