Release to Manufacturing: N2KExtractor™ Version 2.0.0

Maretron announces the release of version 2.0.0 of the N2KExtractor™ NMEA 2000 Data Extractor Software. The program is available from (<http://www.maretron.com/downloads>) under the “Software Updates” category.

The full build number of the version is 2.0.0.20130424.

Changes in the N2KExtractor™ version 2.0.0 from version 1.1.0:

- Simulates time values when there is no time data on the network. This will happen when there is no GPS with a valid position fix on the network. Previously data collected over this period would not be accessible because it could not be associated with a time period.
- Gets position information from PGN 129029 or PGN 129025. Position information is available in both of these PGNs. Previously only PGN 129029 was considered as a source of position data.
- Starts with window large enough that the fields are readable.
- Added Open Manual entry to Help Menu.
- Added Vessels and Configuration dialogs so that fleet users can easily access multiple vessels.
- Allows reading of values directly from VDR100 through the VDR100's LAN connection, allowing you to view information without removing the USB flash drive from the VDR100.
