

Can I use the DCR100 to turn on my Marine Audio Amplifier ?

Article Number: 644 | Rating: 5/5 from 1 votes | Last Updated: Wed, Feb 28, 2018 3:19 PM

Yes, The DCR100 can control your audio amplifier by way of the “Remote” input to the amplifier. For vessels with large audio networks an N2KView user can use this feature to selectively control audio amplifiers by way of a single or multiple DCR100 channels. Simply wire the audio head unit “Remote” wire directly to the input channel (terminal 1) of the DCR100 as shown in Figure 1. For multiple audio amplifier switching see Figure 2. See Figure 3 for an example of how the switches might look using N2KView and see Figure 4 for how switching might look for the DSM150/DSM250.
