

I see the SSC200 uses the NMEA 0183 identifier II (i.e., the two letters following the \$ of an NMEA 0183 sentence); is it possible to change the identifier to some other value?

Yes, it is possible to change the identifier that the SSC200 transmits as part of NMEA 0183 sentences. Please refer to the user's manual for instructions on how to make this change.
