

I see that Maretron's DSM150, DSM200, and DSM250 displays have a J2K100 configuration setting called "J1939 Diagnostic Messages:"; what is this?

Maretron's DSM150, DSM200, and DSM250 displays have a J2K100 configuration setting called "J1939 Diagnostic Messages:" which is used to configure the J2K100 to pass diagnostic messages from the J1939 network through to the NMEA 2000 network. Normally, the J2K100 blocks all J1939 diagnostic messages, although this setting allows the diagnostic messages to be passed through to the NMEA 2000 network.
