

If I use the J2K100 with my Onan generator that has a power rating between 4-32kW, what data can I expect to see on the NMEA 2000 network?

The J2K100 provides the following information when hooked to an Onan generator with a power rating of 4-32KW:

- Generator Average Line-Neutral AC RMS Voltage
- Generator Average AC RMS Frequency
- Engine Coolant Temperature
- Engine Oil Pressure
- Battery Voltage
