

I see that Maretron's DSM250 displays have a DCM100 configuration setting called "Reset Factory Defaults"; what is this?

Maretron's DSM250 displays have a DCM100 configuration setting called "Reset Factory Defaults", which is used to return the DCM100 to its factory settings. Resetting the DCM100 sets the NMEA 2000 instance back to 0 and returns PGN enable/disable back to the factory defaults.
