

Can Maretron's DSM150 or DSM250 display or N2KAnalyzer configure certain Airmar transducers?

Yes, Maretron's multi-function color displays (DSM150 and DSM250) or Maretron's N2KAnalyzer configuration tool (used in conjunction with the USB100 or IPG100 gateway) can be used to configure certain Airmar transducers. Please see the attached pdf file for a table of the products and parameters that can be configured.
