

How do I create an alert in N2KView?

To create an alert in N2KView, do the following:

- Click on "Commands & Settings"
- Select "Alert Setup"
- Select "New"
- A window called "Select Parameters" will appear
- Scroll through the parameter list and select the parameter folder you wish to use
- Select the type of alert you wish to create
- An "Alert" window will then appear allowing you to define the parameters of the alert

Please review Section 10, "Alerts" of the N2KView User's Manual for in-depth details of how N2KView alerts work.
