

# Can Non-Maretron displays control the DCR100?

Can third party (non-Maretron) controls or displays command the DCR100 to toggle whether in Switch or ALM mode?

The DCR100 reports status using the standard NMEA2000 message 127501 that any NMEA2000 display can interpret, but to command the DCR100 to change state is limited and can only be achieved using the following Maretron products:

- DSM150
- DSM250
- TSM800(C)
- TSM1330(C)
- N2KView PC
- N2KAnalyzer 2.21.3 or higher
