

I have a STEYR Engine connected to a STEYR Control Center SCC, What cable should be used to connect the J2K100?

The STEYR SCC system is J1939 compatible to a J2K100. Use the MCF-2M-D4 cable as a connection to a single or dual J2K100 segment for engine system conversion. The MCF-2M-D4 can be connected to an unused panel mating connection originating from the SCC display's one of two 4 pin pigtailed. Details can be located at <http://www.steyr-motors.com>, under SCC 4/6 cylinder applications.
