Can I receive text message alerts without an SMS module?

Many USA and Canada cellular users can take advantage of the complimentary Email to SMS gateway service.
This will allow you to send an email as a SMS/Text message to an end user via the N2KView Alerts module.

Please reference the following article for initial setup of the email Alert service within N2KView.

- https://www.maretron.com/wp-content/phpkbv95/article.php?id=698

This feature does not replace the full services of the SMS100/SMS200 Text Message Module.

You can set up a Default Email Address or Additional Email Address using the following method.

- *AT&T* – number@txt.att.net
- *Boost Mobile* – number@myboostmobile.com
- *Metro PCS* – number@mymetropcs.com
- *Sprint* – number@messaging.sprintpcs.com
- *T-Mobile* – number@tmomail.net
- *Ting* – number@message.ting.com
- *Tracfone* – number@mmst5.tracfone.com
- *Ting* – number@message.ting.com

- *U.S. Cellular* – number@email.uscc.net
- *Verizon* – number@vtext.com
- *Virgin Mobile* – number@vmobl.com

For example, if you were using the T-Mobile service and cellphone number is (866) 550-9100, the email address would be:

8665509100@tmomail.com

Please be advised that this service is handled by your cellular service provider, not by Maretron/N2KView we are only making use of it.

For additional support or questions please contact Maretron Support at Support@Maretron.com or (866) 550-9100.
